

1 ABSTRACT OF DISCLOSURE
2

3 A knee pad adapted to cover the knee of a user is made from a single
4 sheet of durable, pliable sheet material, or from a plurality of separate
5 segments made of such sheet material. It comprises a body having an
6 open side, an elbow section and a leg section, said elbow section and a
7 leg section joined to form a corner. A strap member is attached to
8 extends between opposed sides of the leg section that enables the user
9 to secure the knee pad to the user's knee with the knee placed into the
10 open side and seated against the corner. Outer edges of the leg and
11 elbow section are each inwardly contoured forming a concave
12 indentation respectively in each of these outer edges.
